Solution Method:
         I need dynamic array to fill it. File can be large . I need a parser for get input.
To replace a need a word find function. I gived filename from inside it is name input.txt

Your design decisions:
         A dynamic array is created and it is growing when take input.
 I need str tok to parse strings.
 To understand type of entered value (a) b) c) etc.) a counter is used.
  Change done and record a buffer.
  Buffer is printed to file.
input and screenshots
a)
         recieved
b)
         recieved

c)
         recieved
d)
received

rest failed.
